Education

GITAM University, B.Tech in Computer Science Engineering

Aug 2022 – Present

- GPA: 8.10/10
- **Coursework:** Operating Systems, DBMS, Data Structures and Algorithms

Experience

AI/ML Intern, Intel Corp

May 2025 – Jul 2025

- Developed a lightweight image sharpening model using Knowledge Distillation (SwinIR → IMDN) on datasets like DIV2K and Unsplash, achieving SSIM > 0.90 and MOS ≥ 4.0/5.
- Optimized the student model for real-time use (30–60 fps, 1080p) with reduced size (38MB → 1.8MB), gaining experience in TensorFlow, PyTorch, and GPU-based training.

Software Engineering Intern, SmartKnower

Oct 2022 – Dec 2022

- Built a CNN model on the MNIST dataset, applying data preprocessing (normalization, categorical encoding) to achieve 95% accuracy and reduce training errors.
- Led a team of 5, gaining hands-on experience in Python, TensorFlow/Keras, deep learning and model optimization.

Projects

EcoBin – Smart Dustbins Dashboard

[Github](#)

- Implemented a IoT-based waste monitoring system using Arduino and ultrasonic sensor, integrated with Blynk API to track fill levels, log data and display real-time dashboards.
- Developed Python scripts for data analysis and integrated Google Maps API to optimize waste collection routes, reducing overflow incidents in communities and campuses by 30%.

NASA-CMAPSS-RUL-Prediction

[Github](#)

- Built a Bidirectional LSTM model to predict the Remaining Useful Life (RUL) of aircraft engines using the NASA C-MAPSS FD001 dataset, achieving a low MAE of 9.77 cycles on test data
- Applied advanced time-series preprocessing techniques including sliding window generation, feature scaling, and Group K-Fold validation to enhance model generalization and robustness

Smart-home-service-platform

[Github](#)

- Built a full-stack house help booking platform with role-based workflows, secure authentication (bcrypt) and RESTful APIs using Express.js, SQLite3 and Razorpay integration.
- Designed a responsive UI with real-time booking, online payments and dynamic dashboards for live analytics on bookings, reviews and earnings.

Technologies

Languages: SQL, C, Python, Java and Javascript

Frameworks: TensorFlow, CNN's, PyTorch, ReactJS, Tailwind CSS and Flutter

Technologies: Git, GitHub, VS Code, Google Colab, ThingSpeak, Blynk

Software Development: Data Structures and Algorithms, Object Oriented Programming and Salesforce

Certifications

PWC Launchpad: Proficient in Salesforce CRM and automating workflows, and optimizing business processes.

AWS Solutions Architect: Exposure to cloud-native infrastructure and scalable deployment of AI systems.

Cisco CCNA: Gained knowledge of networking, routing, switching, and secure connectivity for scalable systems.

Pepisco Job Simulation: Experience in continuous deployment protocol using CI/CD.
